

Bi-LED

HEADLIGHT

90 mm / 4 functions
(+)

The first Bi-LED modular headlight with low beam, high beam, position light, DRL and option to inform about the battery charging process in electric vehicles.

Product awareness enters a new level.

You can now offer the purchaser knowledge that is invaluable in target products such as buses.

Meet the **NEXT_Horizon** line from OE Industry, which was created with one very specific purpose. To enable everyone to individually configure the headlight.

Everyone. Regardless of the type of vehicle, its intended use and the scale of production.

Discover the CUSTOM version of headlights from OEI. Start now to benefit from the possibilities previously only available to high-volume manufacturers.

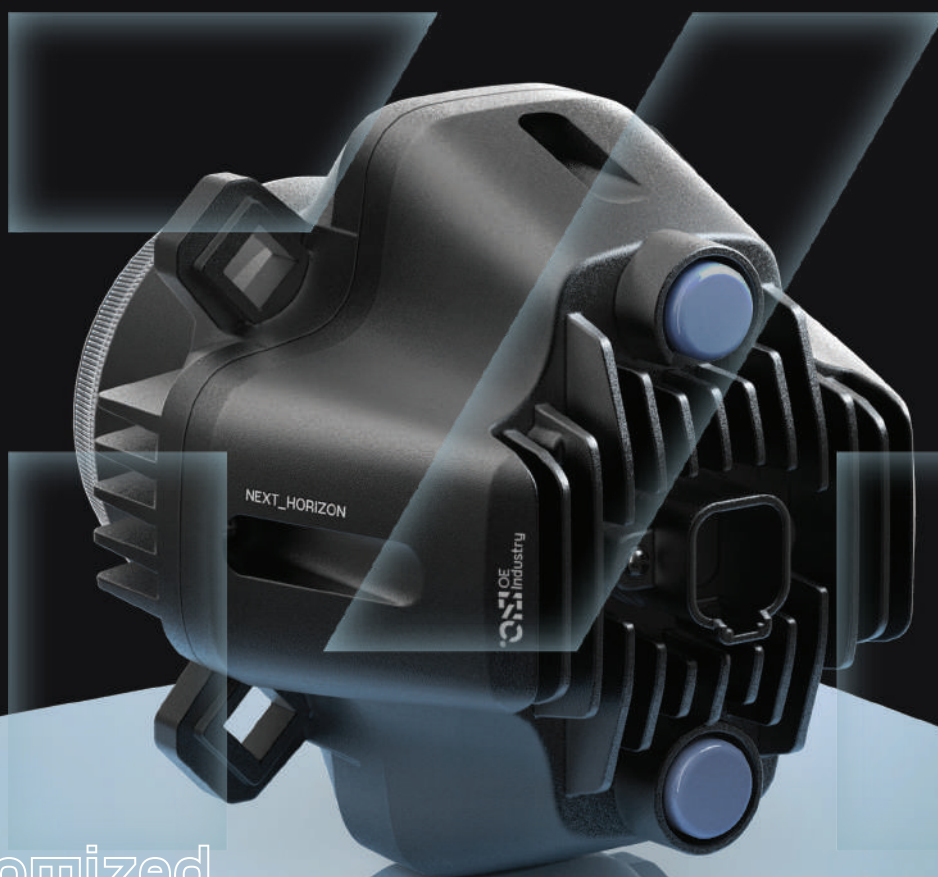

Explore these possibilities by:

- + Increase in voltage from 24 to 48 volts,
- + Activation of additional light functions,
- + Programming of the green ring function, which informs of the battery charging process in electric vehicles,
- + Selecting the colour of the reflector inside and the design.

From now on, always get exactly what you want. A product as individual as your design and your business. And therefore – pay **ONLY** for the features you will actually use.

From now on, the future belongs to those who have the courage to create it. Regardless of the scale of production.

Create your own NEXT_Horizon.

**Future is customized.
Dare to create it.**
